                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           LONGEST FORM (VEGF-3, SHOWN HERE) CONTAINS A BASIC INSERT LINKED TO CELL-ASSOCIATION/HEPARIN-BINDING.

TO CELL-ASSOCIATION/HEPARIN-BINDING.

TO SELL-ASSOCIATION/HEPARIN-BINDING.

THE CHURCH ITEMUS, PARAVENTPICULAR NEUROSPITHELIUM, PLACENIA AND THE CHURCH ITEMUS, PARAVENTPICULAR NEUROSPITHELIUM, ADRENAL KIDNEY GLOMERULI. ALSO FOUND IN BROWCHIAL EPITHELIUM, ADRENAL GLAND AND IN SEMINIFEROUS TUBULES OF TESTIS. HIGH EXPRESSION OF GLAND AND IN KIDNEY GLOMERULI AND CHOROLD PLEXUS IN ADULTS.

VEGF CONTINUES IN KIDNEY GLOMERULI AND CHOROLD PLEXUS IN ADULTS.

VEGF CONTINUES IN KIDNEY GLOMERULI AND CHOROLD PLEXUS IN ADULTS.

SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SEQUENCE OF 1-3 FROM N.A

NEOROGENIC LOCUS NOTCH PROTEIN PRECURSOR.
NEUROGENIC GENES.
-!- SIMILARITY: HIGH: WITH OTHER NOTCH-TYPE PROTEINS
-!- SIMILARITY: CONTAINS 36 EGF-LIKE DOMAINS.
-!- SIMILARITY: CONTAINS 3 LIN/NOTCH REPEATS.
-!- SIMILARITY: CONTAINS 5 ANK REPEATS.
                                                                                                                                                                                                                                                                                                                                                              Harris W.A.; "Many cell types specified by Notch function."; Curr. Biol. 1:120 122(1991).
